

CONFIDENTIAL

Report to Investors in The Children's Investment Fund

Period: 1st January 2005 to 31st March 2005

Dear Investor,

Returns

Returns to investors for this period, net of (a) management and accrued incentive fees and (b) monthly and annual accrued charitable donations from the fund, are shown below:

Period	Master Fund Assets €m	Class A (3yr) \$	Class B (5yr) \$	MSCI Europe (€)	SP500 (\$)	MSCI World (\$)
January 05	1,960.4	+6.45%	+6.68%	+1.45%	-2.53%	-2.31%
February	2,265.0	+3.80%	+3.90%	+2.72%	+1.89%	+3.01%
March	2,274.7	-1.07%	-1.07%	-0.74%	-1.91%	+0.28%
Q1		+9.31%	+9.65%	+3.44%	-2.59%	+0.91%

Period	Outright Longs	Outright Shorts	Long side of Share Class Arbitrage	Short side of Share Class Arbitrage	Gross	Net
End January 05	122.3%	-5.5%	27.4%	-18.9%	174.1%	125.3%
End February	125.4%	-5.0%	16.6%	-14.2%	161.2%	122.7%
End March	129.5%	-5.2%	16.4%	-13.6%	164.7%	127.1%

% of Master Fund Net Assets

At the time of writing, the Master Fund's net exposure has since fallen to 118% through a combination of subscriptions, sale of assets and realized gains from foreign exchange hedging.

Portfolio Update

Deutsche Boerse

Deutsche Boerse has three similarly sized businesses, all with strong monopolistic characteristics:

- (1) the German stock exchange
- (2) Eurex – one of the world's largest derivatives exchanges
- (3) Clearstream – a clearing and settlement business primarily for bonds.

At our average cost, the company had a market cap of approximately €5bn with €700m of net cash. It had been a small position (1-2% of NAV) for us during 2004. The more we analysed the company, however, the more we realised that the valuation, at a 11-12% free cash flow yield to EV (for structurally growing businesses with both high barriers to entry and ROEs), was half intrinsic value. The main reason for this was concern over value destructive acquisitions, lack of understanding by the market of the quality of the businesses, and little appreciation of the opportunity to leverage the balance sheet which had 15% of the market cap in net cash.

In December 2004 the company announced a proposal to buy the London Stock Exchange at a price which we estimated gave at best a 5% return on investment, leading to value destruction of 5-10% of the intrinsic value. However, regardless of whether the deal went through, we saw 50-100% upside in the stock, with the high end if the deal could be stopped and the balance sheet leveraged. We accumulated a holding of just under 8% of the company by the end of Q1 2005 (representing 20% of the fund's NAV) and once we reached 5% filed in the shares and formally requested an EGM to remove the entire supervisory board. This was our only option to stop the deal since, under

German law, we have no entitlement to a vote on the deal and the management had ignored all shareholder requests for a vote.

During Q1 shareholders representing, we believe, over 50% of the shares privately and publicly asked the company to stop the LSE deal and in March were successful in persuading the management to terminate the proposed deal and initiate a large share buyback program of 7% of the shares and probably double this amount within a year. We support these buybacks as being value accretive at current share prices. The stock has so far appreciated approximately 25% over our average cost.

It has been a valuable experience in the pluses and minuses of activist investing. At the end of the day we believe that companies are owned by shareholders and should be run for them. When managements in our companies do things against shareholders' interests, we will always work to protect our investors, as we promised you we would from the inception of our fund. It has also been a good example of where having longer term capital has allowed us to create value in our investments which we would not have otherwise have been able to do.

Euronext

During Q1 Euronext also made a proposal to purchase the LSE but did not name a price. Its bid has been referred to the UK's Competition Commission for up to 6 months. Euronext has significant synergies of combining with LSE but the price it can pay to still make a value accreting deal is in the range of £4 to £5 per share and not higher in our opinion. We have made our views clear to the Euronext management and, in this case, any deal must be approved by shareholders who we believe are rational and share our opinion. Harris Associates, the largest shareholder of Euronext (with 10% of the shares) has also publicly stated that £5 per share is at the limit of their view of value creation and they will oppose a value destructive offer. During the quarter, Euronext's stock price, which had been flat during 2004, appreciated 20% as investors re-rated the whole stock exchange sector in Europe (which has been trading at deep discounts to global peers for the last few years) and warmed to the option value of a potentially value accreting deal.

LG Corp

LG Corp, after having doubled during 2004, appreciated more than 40% in Q1 2005. The stock started the year at a 60% discount to NAV and some 3X earnings for the second largest industrial conglomerate in Korea after Samsung Group. The catalyst for performance was the announcement by Sovereign Asset Management that they had bought \$1bn of stock in LG Corp and LG Electronics (its primary subsidiary). Sovereign is a private family investment fund with one of the very best records in investing in emerging markets. They have waged a very high profile battle with SK Corp in Korea to improve its corporate governance in what has been a home run investment for them.

During March, I visited the CFO of LG Corp in Seoul (as well as its key subsidiary companies) to review our investment. I have been impressed by the professionalism with which the company has conducted itself during our investment and the implementation of a royalty plan that will probably create as much as \$2 billion of value for LG Corp stockholders.

KT & G

During my trip to Korea I met with the CEO of KT & G. KT & G has announced plans to repurchase 24% of its shares 2004-2008. Indeed, in 2004 nearly 8% were repurchased. The CEO assured me that the plans for stock repurchased and not cancelled (a maximum of 1-2% of the outstanding shares per annum) were to be used (a) in lieu of salary increases for employees if profit budgets were exceeded and (b) necessary social welfare contributions in order to maintain relations with the government. 2005 earnings will be depressed due to destocking after stockpiling by retailers ahead of a tax hike on January 1 2005.

On 2006 earnings we see the company trading on EV/Operating profit of around x 4. A similarly sized market cap (circa \$5bn) regional comp, HM Sampoerna, was bid during the quarter for cash by Altria at more than 3X the valuation of KT & G. We are not expecting a takeover of the company, but we do believe the company could take itself private with its own balance sheet through share repurchases. Templeton has filed with 7% of the company (we own directly and in swaps around 6%). We have asked the CEO to resume share buybacks aggressively in 2005 and are hopeful that this will occur. The company is also paying a 5% dividend yield while we wait.

European Toll Roads and Utilities

Our European toll roads and utilities all appreciated during the quarter despite a sharp correction in many of them mid quarter on concerns over rising rates and rising bond yields. As a reminder, our utilities are nearly all inflation-proofed by virtue of having their tariffs substantively indexed to inflation. We value them with the assumption of 3% real rates versus the 2% implied by the European bond markets today. We used the strength in stock prices to exit our large holding in Snam Retegas which had given us a total return of not far from 50% since the inception of the fund. We have initiated a new 6% position in a European utility with substantial upside to fair value that we prefer not to name at this point since we may further increase our holding and do not wish to prejudice this process.

Indian Banks

We have purchased a holding of over 6% of the Fund in a portfolio of 6 Indian banks. We believe that these will prove to be excellent investments trading on average at 6-9X normalised earnings, clean loan books, and with estimated earnings growth of 15-25% pa for many years into the future. Indian financial services are nascent and the economy is booming. The major short term risk to market valuations are rising interest rates (which is likely) but we feel that these risks are more than priced in to current valuations. Both Patrick and I have twice been to India in the last 6 months to meet the managements of these banks.

Italian Banks

The unexpected sector development in Q1 was the emergence of two foreign bids for Italian Banks (Antonveneta and BNL). If approved by the Bank of Italy, they could spur further re-ratings of Italian banks since, until now, these have always been blocked despite EU pressure for a free market in M & A. Banca Intesa is clearly a candidate in the medium term for M & A activity given the expressed desire of its largest shareholder, Credit Agricole, to expand into the Italian market. All of our holdings released solid q4

earnings and state that q1 trading is robust. During the quarter we eliminated our spread position of Intesa (long the saving shares and short the common) as the spread had moved from 30% at inception to 10%. We retain our long saving share position and note that approximately 18% of the saving shares are now owned by Credit Agricole.

TUI

TUI's annual report was released in Q1 and revealed another year of no underlying earnings in its core tourism business. Earnings were, for the third year in a row, created from provision releases and capital gains with no underlying cash generation. Despite this the stock rallied 15% during the quarter increasing further our heavy cumulative losses on this short.

Hyundai Mobis

We have initiated a circa 5% position in this company whose business is supplying replacement and OEM parts to Hyundai and Kia cars globally. It is a well run company with a very high ROE and good growth prospects trading at around 6-7X 2006 earnings. Interests are aligned with the Chairman of the group who personally owns some \$500m of stock in the company, which is also the control vehicle for Hyundai Motor Corp. I met with the CFO during my trip to Korea and was impressed by the pricing power which the company enjoys, the 75% market share of Hyundai/Kia in Korea and the correspondingly dominant share of Mobis in aftermarket parts. As the installed base of Hyundai cars grows around the world due to the strong growth plans of Hyundai and Kia, Mobis will benefit.

Emerging Markets Exposure

We have been steadily increasing our investments outside of Europe over the last year, primarily in Korea and India. We have also built positions in other Asian countries, Brazil and Russia. In aggregate our emerging markets exposure (including Korea which some would argue no longer qualifies for this status) represents some 33% of NAV today.

Our focus on Asia is being led by Oscar Veldhuijzen and supported by Damien Tran and John Ho. John joins us in May from Citadel where he ran a portfolio of US equities. He is fluent in Mandarin and Cantonese and will be based in his native Hong Kong. Resumés for Oscar and John are attached in the appendix to this letter.

During March, John, Oscar and I traveled to Hong Kong and Korea for two weeks of intensive company visits and broker meetings. Our overall impressions were of dynamic economies and companies, but selective rather than broad based opportunities due to the strong run up in valuations over the last couple of years. However, it is clear that substantial inefficiencies remain partly due to limited analyst disclosure and coverage. We feel that a dedicated deep value approach to these markets with local presence will be rewarded in the long term. Since the Fund's inception we have already made very substantial profits in Asia as evidence of this.

Market Correlation This Quarter

The Fund continues to have low predicted beta adjusted net exposure (of 60% of NAV with Beta measured against the European market). However, the fund has shown a higher actual sensitivity to the market in this quarter compared to other quarters, not least because of the growth of Deutsche Boerse in the portfolio, whose sensitivity to the market is higher than our portfolio average. During the quarter our correlation to MSCI Europe was 0.64 (the square root of R squared shown in the chart above).

Foreign Currency Exposure

The Fund continued to routinely hedge its material non-base currency exposure as a general rule. Some currency exposures were left unhedged and these are shown below with their quarter end net positions. Since the quarter end our Indian rupee exposure has been fully hedged.

Russia	2.8% net long
India	7.1% net long
Malaysia	1.2% net long
Thailand	1.0% net long
Mexico	0.4% net long
Indonesia	0.1% net long

These currencies slightly appreciated in the period, especially against the US Dollar. Being unhedged had no material impact on the portfolio.

Liquidity Analysis

The liquidity position of the Fund significantly improved this quarter; 72% of the value of the longs is in stocks of seven days volume or less (48% last quarter). 44% of longs are

Issued on behalf of The Children's Investment Master Fund by The Children's Investment Fund Management (UK) LLP. This report is prepared from sources we believe to be reliable. Some figures are estimates only and should be treated as such. The value of investments may go up or down and you may not get back your original investment. Past performance is not necessarily a guide to future performance. The strategy employed may result in the NAV exhibiting a high level of volatility and so is suitable for professional investors only. The Children's Investment Fund Management (UK) LLP is regulated and authorized by the FSA

three or fewer day's volume compared to 26% last quarter. Part of the explanation is that the majority of the new names in which we invested this quarter were more liquid. For example, Deutsche Boerse (6 days trading volume) has become a substantial part of the portfolio.

NB: Analysis is based upon long positions only, including long side of share class arbitrages

Longs Only			
Liquidity Band		Cumulative %	
(Days)	NAV	NAV	Longs
0	6%	6%	4%
1	5%	11%	8%
2	24%	35%	24%
3	29%	64%	44%
4	9%	73%	50%
5	7%	80%	55%
6	31%	111%	76%
7	5%	116%	80%
9	0%	116%	80%
10	8%	124%	85%
15	8%	132%	91%
17	1%	134%	92%
19	5%	138%	95%
20	1%	139%	96%
>20	6%	146%	100%
Total		146%	

We calculated these numbers taking the fund's holdings and compared them to last three months volume (source: Bloomberg, LP). For example, an 80 share position in a stock which is seen to have average volume of 16 shares daily over the past 3 months is shown as being 5 days volume.

Performance Attribution

More than half our gains this quarter were made in our stock exchange holdings of Deutsche Boerse and Euronext. The remaining gains were broad based. A more detailed breakdown is given in the Appendix.

Assets Under Management

The majority of the new capital taken in during January and the quarter was deployed in Deutsche Boerse and a European utility. We had identified both opportunities prior to requesting the capital in line with our general policy of only taking capital when we have a specific need for it. As discussed on the last investor conference call we have no precise total asset target. If we do not feel comfortable that we can invest the capital that we have effectively and profitably we will return it to investors. At this point in time we continue to believe that we have more good investment ideas than capital.

New Horizon Fund

We have recently agreed to take a minority stake of 25% in a new fund management company that will manage a dedicated Indian equity fund to be called New Horizon. It will be managed by Madhav Bhaskuly, who for the last 6 years has been successfully managing a portfolio of small and mid cap Indian equities for Arisaig in India. The new fund is expected to be launched in the next four to six months. We believe that Madhav's deep experience and contacts in the Indian market will help our Indian equity investing in the Master Fund and hence this project will benefit all our investors. It is not expected that the Master Fund will itself invest in New Horizon.

Investors interested in receiving marketing materials in due course should contact our COO, Doug Shaw at doug@tcifund.com.

The Children's Investment Fund Foundation

CIFF's new activities in the quarter included the following projects.

- (1) Formally signing a deal with the Tamil Nadu state government in India to provide ARV drugs to up to 1,000 HIV positive family members. Yale School of Public Health is formally contracted to evaluate the project.
- (2) Funding The Clinton Foundation for a large scale project to provide ARV drugs manufactured specifically for children. Today around half a million children die each year from HIV/Aids with no access to the drugs due to the lack of production in a form suitable for them and a lack of money to purchase them.

CIFF received regulatory approval to invest substantially all its surplus funds in Management Shares of the Fund and is one of the Fund's largest investors.

Investor Day

We would like to propose an investor day in New York on Tuesday May 17th 2005 if there is sufficient investor interest. The purpose of the day would be to provide an opportunity for investors to meet several of our analysts and hear them present on some of our existing investment ideas in detail and their summary of our investment process and opportunity set. Interested investors should email Doug..

We thank you for your continued support and look forward, if you are able to join, to speaking to you on our regular quarterly investor conference call on April 12th at 11 am EST. Dina Grundy (dina@tcifund.com) can provide dial-in details if you have not received them.

Christopher Hohn

Oscar Veldhuijzen Resumé

- 2002-2005 Senior Investment Manager, Philips Investment Management
Managed the Asian investment team
Managed Asian equity portfolio worth U\$500mn
Developed detailed financial models for a wide range of Asian stocks and summarized them into a database.
Developed and implemented comprehensive framework for macro economic analysis
- 2000-2002 VP Research Sales, Goldman Sachs
Sales of Asian research product to European clients
- 1998-2000 Investment Manager, Pictet Asset Management
Managed a U\$100mn Asian equity portfolio and was part of the emerging market investment team managing U\$3bn worth of equities
- 1997 Research Analyst, HSBC James Capel Hong Kong
Covered small cap companies based in Hong Kong as a research analyst
- 1994-1996 Financial Analyst, General Electric Co
Worked for GE Capital and Corporate in various assignments as part of their Financial Management Program which I successfully completed in 1996.

John Ho Resumé

Prior to joining TCI, John was a senior equities analyst with Citadel Investment Group in Chicago, US. As part of Citadel's event-driven group, John ran a fundamental equities portfolio with asset and capital restructuring characteristics.

Before moving to the US, John was with the Boston Consulting Group (BCG) in Sydney, Australia, assisting Australian and New Zealand-based clients on corporate finance, value-based management and business strategy issues.

Prior to BCG, John was lecturing finance and option pricing at the University of New South Wales, Sydney Australia, where he also graduated with First Class Honours and University Medal in finance and mathematics. His dissertation "*Real Options Valuation of Australian Gold Mines and Mining Companies*" was published in *The Journal of Alternative Investments*.

John is a native Hong Kong Chinese, and spent time growing up and studying in Sydney, where he is married to another Hong Kong Chinese-Australian. John is also a professionally qualified piano and music teacher and performed in the Sydney Opera House.
