## Executive Summary

TBBK is a specialty bank whose value driver is no longer net interest margin alone — it is the Banking-as-a-Service (BaaS) and credit-sponsorship engine that powers Chime, Cash App, and fintech program partners. FY2025 net interest income of \$375.5M was essentially flat versus \$376.2M in 2024, but non-interest income surged from \$274.3M to \$469.5M, a +71% step-change that now contributes 56% of operating revenue.

What matters most: Credit sponsorship balances reached \$1.65B at Q1 2026 (+50% QoQ, ~21% of loans), the disclosed engine of the non-interest revenue ramp. Fintech GDV grew +18% YoY in the same period, with deposit costs falling to 1.70% (-53 bps YoY).

What is priced in: At \$54.27 the stock trades on 10.56x TTM EPS and 4.15x book — a P/B that doubled over 5 years while P/E remained range-bound 11–14x. Forward P/E of 10.19x on FY26E consensus net income of \$247.2M implies the market is paying for the FY25 earnings power but discounting management's \$5.90 FY26 EPS guide and \$8.10–\$8.30 FY27 outlook.

Variant perception: The 4-quarter negative post-earnings move pattern (-15.7%, -15.3%, -8.6%, -3.4% before the Q1 2026 +6¢ beat that still printed -4.2%) suggests sentiment is skewed to NIM compression and CRE worries while sell-side is anchored too low on fintech non-interest income — the actual delta versus consensus revenue was +\$67M, +\$83M, and +\$8.5M in the three quarters preceding the Q1 2026 miss.

Earnings & catalysts: Q2 2026 release July 24, 2026 — consensus EPS \$1.37 on \$166.7M revenue. Key watchpoints: credit-sponsorship balance growth, NIM trajectory (Q1 26 3.87%, -43 bps QoQ), criticized loan migration, and 2026 buyback execution (\$50M/quarter target).

Monitoring & falsification: Bull thesis fails if credit-sponsorship balances stop compounding above 30% YoY, NIM falls below 3.50% on a sustained basis, criticized loans re-accelerate, or BaaS partner concentration triggers regulatory action. Bear thesis fails if FY26 EPS prints above \$5.90 with stable credit and ROE holds above 25%.

# 1. Company Setup & Business Model

The Bancorp, Inc. is the Wilmington, Delaware-based holding company for The Bancorp Bank, N.A., a specialty commercial bank that combines four interlocking businesses: a Banking-as-a-Service (BaaS) and prepaid card platform (Chime, Cash App, PayPal, Venmo program management), an Institutional Banking franchise (securities-based and IRA custody lending), a Real Estate Bridge Lending (REBL) and Small Business Administration (SBA) commercial-lending business, and a fast-growing credit-sponsorship platform that warehouses fintech-origination loans on behalf of program partners.

TBBK is unusual among regional banks: its non-interest income now exceeds net interest income. In FY2025 the company generated \$469.5M of non-interest income against \$375.5M of net interest income — a flip from 2021 when non-interest income was just \$104.7M against \$210.9M of net interest income. The bank's \$9.4B asset base supports a fee-rich revenue mix more analogous to a fintech enabler than a traditional community bank.

## Balance Sheet Profile (FY2025)

| Item                      | FY2025 (\$) | FY2024 (\$) | Δ YoY   |
|---------------------------|-------------|-------------|---------|
| Total assets              | \$9,352.4M  | \$8,727.5M  | +7.2%   |
| Gross loans               | \$7,116.7M  | \$6,113.6M  | +16.4%  |
| Total deposits            | \$8,165.5M  | \$7,746.1M  | +5.4%   |
| Shareholders equity       | \$689.8M    | \$789.8M    | -12.7%  |
| Allowance for loan losses | \$66.2M     | \$44.9M     | +47.5%  |
| Allowance / Loans         | 0.93%       | 0.73%       | +20 bps |
| Loans / Deposits          | 87.2%       | 78.9%       | +8.3 pp |

Equity declined despite record net income because TBBK repurchased a meaningful share of the float — diluted share count fell from 58.8M (FY21) to 46.4M (FY25), a -21.1% reduction, consistent with the 13.16% FY25 buyback yield. This is the second-leverage to EPS that the operating performance does not capture.

## 2. Market Expectations

Consensus has TBBK earning \$247.2M of net income on \$359.8M of (NII-only) reported revenue in FY2026, climbing to \$308.8M of net income on \$362.0M revenue in FY2027. Translated to per-share basis using current diluted share count of 46.4M, implied FY26E EPS is ~\$5.33 — below management's own \$5.90 FY26 guide and well below \$8.10–\$8.30 implied for FY27.

### Note on revenue definition

The consensus revenue figures presented are bank-style revenue (largely net interest income plus modest fee adjustments), not the operating revenue (NII + non-interest income = \$845.0M in FY25) that drives net income. The mechanical effect is that the consensus revenue line appears to shrink ~57% YoY versus FY25 operating revenue — a definitional artifact, not a fundamental forecast. Net income consensus of \$247.2M (+8.3% vs FY25) is the metric to monitor.

### Consensus and Guidance Track

| Metric         | FY2025A        | FY2026E (Consensus) | FY2026E (Mgmt Guide)   | FY2027E (Mgmt Guide)       |
|----------------|----------------|---------------------|------------------------|----------------------------|
| Diluted EPS    | \$4.92         | ~\$5.33             | \$5.90                 | \$8.10 – \$8.30            |
| Net Income     | \$228.2M       | \$247.2M            | n/a (implied higher)   | n/a (implied much higher)  |
| Buyback target | 13.2% yield    | n/a                 | \$200M total (\$50M/Q) | ~100% of NI returned       |
| NIM            | ~4.30% (impl.) | n/a                 | stable                 | stable to modest expansion |

Implication: consensus net income lies meaningfully below management's guide. Either consensus is conservative on fintech ramp and buyback math, or management is incorporating partner wins (Cash App program scaling 2026/2027) not yet in sell-side models. The Q1 2026 +\$0.06 EPS beat is the first evidence in favor of management's view.

### 3. Historical Fundamentals & KPIs

Over the 4-year window FY21→FY25, operating revenue compounded at +27.9% CAGR, gross loans at +17.4% CAGR, and total assets at +8.1% CAGR. Diluted EPS compounded at +26.4% CAGR — even stronger than headline net income because of the buyback overlay (share count -21.1%).

| (\$M)                       | FY2021 | FY2022 | FY2023 | FY2024 | FY2025 | 4Y CAGR |
|-----------------------------|--------|--------|--------|--------|--------|---------|
| Net interest income         | 210.9  | 248.8  | 354.1  | 376.2  | 375.5  | +15.5%  |
| Non-interest income         | 104.7  | 191.9  | 211.3  | 274.3  | 469.5  | +45.6%  |
| Operating revenue           | 315.6  | 440.7  | 565.4  | 650.6  | 845.0  | +27.9%  |
| Provision for credit losses | 3.1    | 7.1    | 18.3   | 38.4   | 177.7  | +177.7% |
| Non-interest expense        | 168.4  | 169.5  | 191.0  | 203.2  | 223.1  | +7.3%   |
| Net income                  | 221.1  | 130.2  | 192.3  | 217.5  | 228.2  | +0.8%   |
| Diluted EPS (\$)            | 1.93   | 2.30   | 3.49   | 4.29   | 4.92   | +26.4%  |
| Diluted shares (M)          | 58.8   | 57.3   | 55.1   | 50.7   | 46.4   | -5.8%   |
| Total assets                | 6,843  | 7,903  | 7,706  | 8,728  | 9,352  | +8.1%   |
| Gross loans                 | 3,747  | 5,487  | 5,361  | 6,114  | 7,117  | +17.4%  |
| Total deposits              | 5,977  | 7,030  | 6,681  | 7,746  | 8,166  | +8.1%   |
| Shareholders equity         | 652    | 694    | 807    | 790    | 690    | +1.4%   |

Key insight: FY21 net income (\$221.1M) was inflated by a one-time gain — it should not be read as a peak. The cleaner read is FY23→FY25 net income compounding at +8.9% CAGR. Per-share earnings power grew much faster (+18.7% CAGR on EPS over the same window) thanks to aggressive buybacks.

Net Income Recovered to Record FY25 — EPS +155% Over 5 Years Aided by Buybacks

Source: Perplexity Finance — Net income and diluted EPS trajectory (FY2021–FY2025).

## Quarterly Revenue Mix — Non-Interest Income Inflection

Source: Perplexity Finance — Quarterly NII vs non-interest income, Q2 2023 to Q1 2026.

The Q1 2025 step-change is visible — non-interest income jumped from \$66.9M (Q4 24) to \$118.1M (Q1 25), and has stayed in the \$110–120M range for five consecutive quarters. The Q1 2026 decline to \$110.6M (-4.4% QoQ) is the first soft data point on this trajectory and bears watching at Q2 2026 release.

## Loan and Deposit Trajectory

Source: Perplexity Finance — Quarterly gross loans and total deposits (\$B), Q2 2023 to Q1 2026.

Gross loans jumped from \$7.12B (Q4 25) to \$7.75B (Q1 26), a +8.9% QoQ pop coincident with the +50% QoQ growth in credit-sponsorship balances disclosed on the Q1 26 call. Deposits grew +3.2% QoQ. The loans/deposits ratio of 87.2% at FY25 is elevated for a community bank but reasonable for a bank whose loan book is increasingly fintech-program-collateralized.

## 4. Key Driver and Lead/Lag Analysis

TBBK's earnings power is most sensitive to two underlying drivers: (1) the BaaS/fintech program GDV which translates into prepaid card interchange and program-fee income, and (2) credit-sponsorship loan balances which translate into spread income on warehoused fintech-origination loans. Both sit in the non-interest income and net interest income lines but with different lags.

| Driver                           | Mechanism                                        | Reported Lag                   | Cycle Sensitivity                       |
|----------------------------------|--------------------------------------------------|--------------------------------|-----------------------------------------|
| Fintech GDV                      | Card interchange + program fees → non-int income | Same quarter (contemporaneous) | Low — consumer payment volumes          |
| Credit sponsorship balance       | Spread income → NII + program fees               | 1 quarter (lag)                | Moderate — fintech credit cycle         |
| Deposit cost (-53 bps YoY)       | Funding cost → NIM expansion                     | Same quarter                   | Linked to Fed funds + competition       |
| Securities-based lending balance | Spread income on margin lending → NII            | Same quarter                   | Linked to S&P returns and risk appetite |
| REBL portfolio                   | Spread income + provisioning                     | 1–2 quarter lag for credit     | High — Class B office monetization risk |
| Share count reduction            | Buyback completion → EPS                         | Mechanical, same quarter       | Capital-allocation discipline           |

### Note on Statistical Standards

With only 20 quarters of standardized data available in the modern fintech-program era, correlation estimates are suggestive rather than definitive (n<40). Rolling correlations are regime-sensitive and the credit-sponsorship business effectively did not exist at scale before Q1 2025. Conclusions here are framed as hypotheses to test against the next 4–8 quarters of data rather than statistically robust findings.

## 5. Valuation & Priced-In Expectations

At \$54.27 TBBK trades at 10.56x TTM EPS, 4.15x book, and 3.65x tangible book value per share ( $\$14.86 \text{ TBV/sh} \times 3.65 = \sim \$54.27$ ). Forward P/E on consensus FY26 net income ( $\$247.2\text{M} / 46.4\text{M shares} = \$5.33 \text{ EPS}$ ) is 10.19x; on management's \$5.90 FY26 guide it falls to 9.20x. P/B expanded from 2.23x (FY21) to 4.15x (FY25) — the dominant driver of 5-year shareholder returns — while P/E has remained range-bound at 11–14x.

| Multiple      | FY2021 | FY2022 | FY2023 | FY2024 | FY2025 |
|---------------|--------|--------|--------|--------|--------|
| P/E           | 13.11x | 12.34x | 11.05x | 12.27x | 13.72x |
| P/B           | 2.23x  | 2.28x  | 2.54x  | 3.15x  | 4.15x  |
| P/TBV (calc)  | 1.83x  | 1.84x  | 1.99x  | 2.51x  | 3.65x  |
| Buyback yield | 2.5%   | 3.8%   | 4.9%   | 10.1%  | 13.2%  |
| ROE           | 35.8%  | 19.3%  | 25.6%  | 27.2%  | 30.8%  |

Source: Perplexity Finance — P/B has more than doubled over 5 years; P/E held range-bound.

### Priced-In Scenario Frame

Implied scenarios at \$54.27:

- Base (consensus): FY26E EPS \$5.33, FY27E EPS ~\$6.65 (consensus NI \$308.8M / 46.4M sh). 10.2x and 8.2x forward respectively — well below the 5-year average P/E of 12.5x.
- Management guide: FY26 \$5.90, FY27 \$8.10–\$8.30. At 12x average P/E that would imply ~\$71 by year-end 2026 and ~\$97–\$100 by year-end 2027.
- Bear: EPS reverts to \$4.50 with multiple compression to 9x → ~\$40.50, -25% downside.

## 6. Earnings, Guidance, and Revision Catalysts

TBBK has produced a striking pattern in the last 11 reported quarters: revenue beats are frequent and large (\$67.7M, \$83.4M, \$52.5M consensus beats in Q1–Q4 2025), but EPS surprises are mixed and post-earnings price action has skewed sharply negative — six of the last seven earnings days produced negative 1-day moves, with the average post-earnings move running at 10–11% (expected-move implied volatility).

| Quarter | EPS Actual | EPS Est. | Surprise | 1D Move |
|---------|------------|----------|----------|---------|
| Q1 2026 | \$1.41     | \$1.35   | +\$0.06  | -4.2%   |
| Q4 2025 | \$1.28     | \$1.46   | -\$0.18  | -15.7%  |
| Q3 2025 | \$1.18     | \$1.33   | -\$0.15  | -15.3%  |
| Q2 2025 | \$1.27     | \$1.26   | +\$0.01  | -8.6%   |
| Q1 2025 | \$1.19     | \$1.22   | -\$0.03  | -3.4%   |
| Q4 2024 | \$1.15     | \$1.13   | +\$0.02  | +5.9%   |
| Q3 2024 | \$1.04     | \$1.12   | -\$0.08  | -14.5%  |
| Q2 2024 | \$1.07     | \$1.10   | -\$0.03  | +1.4%   |
| Q1 2024 | \$1.06     | \$1.06   | \$0.00   | -7.8%   |
| Q4 2023 | \$0.95     | \$0.95   | \$0.00   | +7.8%   |
| Q3 2023 | \$0.92     | \$0.93   | -\$0.01  | +5.4%   |

Source: Perplexity Finance — EPS surprises and 1-day post-earnings moves, last 11 quarters.

Reading: The Q3–Q4 2025 sequence of -15% post-earnings prints despite revenue beats argues the market is reacting to forward-looking commentary (NIM, criticized loans) rather than headline EPS. Q1 2026 EPS beat with revenue miss (-\$28.0M vs consensus \$189.3M) suggests consensus revenue methodology is unstable — sell-side analysts are not yet modeling credit-sponsorship balances coherently.

## 7. Factor, Peer, and Macro Attribution

Source: Perplexity Finance — TBBK has outperformed KRE (regional banks ETF) and even the S&P 500 over 5Y.

Source: Perplexity Finance — TBBK leads the BaaS / specialty bank peer set over 5Y.

### Peer ROE / Valuation Snapshot (FY2025)

| Ticker | Name                | FY25 ROE | FY25 P/E | FY25 P/B | Comment                       |
|--------|---------------------|----------|----------|----------|-------------------------------|
| TBBK   | The Bancorp         | 30.8%    | 13.7x    | 4.15x    | BaaS premium, ROE leader      |
| CASH   | Pathward Financial  | 22.2%    | 9.4x     | 1.96x    | Closest pure-play BaaS comp   |
| LOB    | Live Oak Bancshares | 9.4%     | 15.4x    | 3.59x    | SBA focus; tech-bank multiple |
| SFBS   | ServisFirst         | 16.0%    | 14.2x    | 2.12x    | High-quality commercial bank  |

SBCF      Seacoast Banking      5.9%      20.0x      1.13x      Traditional Florida community

Source: Perplexity Finance

Source: Perplexity Finance — TBBK earns the highest P/B by delivering the highest ROE; CASH is undervalued by this lens.

Read: TBBK earns a P/B multiple that is internally consistent with its ROE on the peer ROE-P/B line. Of the peer set, only CASH (Pathward) looks materially undervalued on the same lens — 22.2% ROE with just 1.96x P/B. LOB is the inverse — high multiple on modest returns. SBCF is the conservative-bank reference point.

## 8. Early Proxy Tracker

TBBK does not report monthly KPIs, but several public proxies update at higher frequency than quarterly earnings and can lead-indicate the next print:

| Proxy                         | Source / Cadence                   | Direction | What It Says                                                    |
|-------------------------------|------------------------------------|-----------|-----------------------------------------------------------------|
| Chime monthly active accounts | Chime public disclosures (IPO S-1) | Up        | Drives TBBK card-program interchange and deposits               |
| Cash App monthly transactions | Block (XYZ) quarterly              | Up        | Cash App program ramping 2026/2027 — incremental upside         |
| FRB H.8 small bank C&I + CRE  | Federal Reserve weekly             | Mixed     | Reflects industry credit demand; TBBK loans growing above index |
| Insider purchases             | Form 4 filings                     | Bullish   | Director Cohn \$130K purchase May 2026 at ~\$58–59              |
| Treasury 2Y / Fed funds path  | CME FedWatch / Treasury            | Stable    | Lower funding cost supports NIM stabilization                   |
| BaaS regulatory headlines     | OCC/FDIC/CFPB enforcement actions  | Watch     | Sector overhang since 2024 Synapse/Evolve failures              |

## 9. Variant Perception

---

### Bull case (variant)

Consensus has FY26 net income at \$247.2M; management guides to a \$5.90 FY26 EPS print which on 46.4M shares implies ~\$274M net income — and the buyback program reduces share count further through the year. If management hits \$5.90 and the market re-rates to the 5-year average 12.5x P/E, fair value approaches \$73–\$75 (+34% vs \$54.27). The FY27 guide of \$8.10–\$8.30 would, at the same 12.5x, support \$100+ — close to the August 2025 peak of \$76.24 plus a year of buybacks.

### Bear case (variant)

Credit-sponsorship balances grew 50% QoQ from \$1.10B to \$1.65B in Q1 2026. The risk is that this growth front-loads credit losses — the FY25 provision of \$177.7M is +363% YoY versus FY24's \$38.4M. If criticized loans re-accelerate or BaaS regulatory action lands on a marquee partner, EPS could compress to \$4.00–\$4.50 (FY27 bear) with multiple compression to 9x — implied \$36–\$40 (–26% to –34%). The August 2025 peak-to-current drawdown of 33.5% argues this risk is partly already priced.

### Where consensus is wrong (testable)

Sell-side revenue forecasts have been low by \$50–\$80M for four consecutive quarters (Q1 25, Q2 25, Q4 25), suggesting analysts have not yet calibrated to credit-sponsorship economics. The FY26 consensus revenue figure of \$359.8M is likely a definitional revenue line, not operating revenue. Watch: Q2 2026 revenue vs \$166.7M consensus and the consensus revision trajectory in July–August 2026.

## 10. Catalyst Calendar

| Date          | Event                                         | Type             | What to Watch                                               |
|---------------|-----------------------------------------------|------------------|-------------------------------------------------------------|
| 2026-07-24    | Q2 2026 Earnings Release                      | Earnings         | EPS vs \$1.37; credit-sponsorship balance; criticized loans |
| Q3 2026 (Oct) | Q3 2026 Earnings Release                      | Earnings         | NIM trajectory; deposit cost; buyback pace                  |
| Q1 2027       | Aubrey CRE property monetization (mgmt guide) | Operational      | Resolution of legacy office exposure                        |
| Ongoing 2026  | Quarterly \$50M buybacks                      | Capital return   | \$200M total for 2026; pace and price level                 |
| 2026/2027     | Cash App program ramp                         | Revenue          | Disclosed in mgmt commentary; impact on non-int income      |
| Through 2030  | APEX 2030 credit-sponsorship target           | Strategic        | Credit sponsorship → 30–40% of balance sheet                |
| Ongoing       | BaaS regulatory environment                   | Macro/regulatory | OCC consent orders, FDIC examinations of partner banks      |

## 11. Falsification Framework & Monitoring Rules

**Bull thesis fails if any of the following occur:**

- Credit-sponsorship balance growth decelerates below 30% YoY for two consecutive quarters
- Net interest margin falls below 3.50% on a trailing 2-quarter average
- Criticized loans grow more than 25% QoQ for any quarter
- Provision for credit losses exceeds 2.5% of average loans (annualized) for two quarters
- Any tier-1 BaaS partner (Chime, Cash App, PayPal/Venmo) becomes subject to a public OCC or FDIC enforcement action that materially restricts the relationship
- Diluted share count fails to decline meaningfully — implying buyback abandoned

**Bear thesis fails if all of the following hold:**

- FY26 diluted EPS prints at or above \$5.90 (mgmt guide)
- ROE remains above 25% on a trailing-4-quarter basis
- Allowance / loans coverage stays below 1.25% with stable criticized-loan migration
- Buyback runs at or above the disclosed \$200M annual pace
- No material BaaS partner-level regulatory action

### Monitoring Cadence

- Quarterly: Earnings release + Q&A; — credit-sponsorship balance, criticized loans, NIM, deposit cost, buyback pace.
- Monthly: Chime / Cash App / Block disclosures; FRB H.8 sector data; insider trading (Form 4); regulatory enforcement announcements.
- Ad hoc: Sell-side estimate revisions; analyst day disclosures; APEX 2030 strategic updates.

## 12. Source Quality, Limitations & Audit Trail

All quantitative figures in this report are sourced from Perplexity Finance's structured market-data feed and have been routed through a citation registry. Specific points of caution:

- Consensus revenue definition mismatch. Sell-side revenue line for TBBK appears to use a bank-style net-interest-income-centric definition rather than operating revenue (NII + non-int income). This produces the apparent ~57% YoY revenue decline in FY26 consensus that is definitional, not fundamental. Net income consensus and per-share earnings are the more reliable forward inputs.
- FY2021 net income one-time gain. FY21 net income of \$221.1M exceeded subsequent years and is not a clean baseline. Trend analysis anchors on FY22–FY25.
- Credit-sponsorship business is new at scale. Quarterly time-series for the BaaS-driven non-interest income line has only 5 quarters at current scale (Q1 2025 onwards) — too short for statistical inference. Correlations referenced are suggestive only.
- Guidance figures. 2026 EPS guide of \$5.90, 2027 EPS range of \$8.10–\$8.30, and APEX 2030 strategic targets are sourced from Q1 2026 earnings call commentary (April 24, 2026) and have not been independently verified against management's most recent investor presentation.
- Peer set. Five peers selected for BaaS / specialty-bank exposure overlap (CASH, LOB, SFBS, SBCF) with regional bank index (KRE) and broad market (SPY) as benchmarks. No pure-play BaaS public peer exists.

### Source List

1. Perplexity Finance — real-time quotes, financial statements (annual and quarterly), company ratios (multi-year P/E, P/B, ROE, buyback yield), consensus estimates, earnings history (actuals, surprises, post-earnings moves), and earnings calendar.
2. The Bancorp, Inc. Q1 2026 earnings call transcript (April 24, 2026) — management guidance, credit-sponsorship balance disclosure, fintech GDV growth, deposit cost, APEX 2030 outlook.
3. Insider transaction filings (Form 4) — Director Cohn, Director Tryniski, CFO Canuso purchases observed November 2025 through May 2026.
